COMPANY SNAPSHOT

1 REVENUE & MARGIN

Last reported annual revenue: \$89.463 billion (2025)

Operating margin: 4.79% (2025)

Net profit: \$2.24 billion (2025)

Net margin: 2.50% (2025)

2 REVENUE TREND

Year	Revenue (Billions USD)	Operating Margin (%)	Net Margin (%)
2025	\$89.46	4.79%	2.50%
2024	\$66.52	-16.27%	-17.78%
2023	\$77.79	-1.06%	-2.88%
2022	\$66.61	-5.31%	-7.59%
2021	\$62.29	-5.44%	-6.89%

3 EMPLOYEES

Total global headcount: 172,000 (as of 2024). Approximately 15% of the workforce is located outside the U.S. (2024).

Breakdown by high-cost locations (US, UK, Germany, Australia, Canada): Not publicly available with consistent recent data that aligns with overall headcount.

4 INDIA PRESENCE

Boeing has a significant presence in India, including:

- India Engineering and Technology Center (BIETC): Located in Bengaluru and Chennai, this is an R&D and engineering center undertaking advanced aerospace work for Boeing's global engineering growth. The Bengaluru campus is a 43-acre state-of-the-art facility, the largest Boeing facility of its kind outside the U.S.. BIETC is expected to employ 4,000 engineers in the next few years.
- Joint Venture (Tata Boeing Aerospace Limited - TBAL): With Tata Group, located in Hyderabad, producing aerostructures for the AH-64 Apache helicopter and vertical fins for the 737 program.
- India Distribution Center: A 36,000-square-foot parts warehouse in Khurja, Uttar Pradesh, for timely access to critical parts.
- Headquarters: Boeing's main office in India is in New Delhi, also serving as the headquarters for Boeing Defence India (BDI). The headquarters for Boeing Commercial Airplanes India and the Global Support Center are in Gurugram.
- Headcount: Boeing directly employs over 3,000 people in India. Including supply chain partners, over 7,000 people work with Boeing in India.

5 RECENT NEWS

November 2025 - May 2026):

(a) Product News:

- In November 2025, Boeing delivered 44 commercial jets, with 32 being 737 MAX aircraft. The company secured 164 gross orders, notably for the 777 family, including the 777X program, and 767s, and delivered six 787s and

two 777s.

- In November 2025, Boeing received a Lot 12 contract from the U.S. Air Force for 15 additional KC-46A Pegasus tankers, valued at \$2.47 billion, and delivered the first B-52 Radar Modernization Program (RMP) flight test aircraft to the U.S. Air Force.
- Boeing also announced it would build 96 AH-64E Apache Helicopters for Poland, with deliveries anticipated to commence in 2028.
- In December 2025, the MQ-28 Collaborative Combat Aircraft (CCA) successfully shot down an airborne target.
- By December 2025, the 737 program increased production to 42 aircraft per month, and the 787 program began transitioning to produce 8 aircraft per month.
- In January 2026, Alaska Airlines ordered 105 737-10s and 5 787 Dreamliners.
- In February 2026, Boeing secured a contract from the U.S. Air Force to ensure the C-17A Globemaster remains mission-ready for decades, and ANA received Boeing's 100th 787 Landing Gear Exchange Delivery. Boeing also announced an order for up to 20 737 MAX Jets from Air Cambodia.
- In May 2026, the FAA approved Boeing to increase 737 MAX production from 42 to 47 aircraft per month. CEO Kelly Ortberg stated the long-term goal for the 737 MAX is 63 aircraft per month.
- The entry into service for the 777X has been pushed back to 2027.

(b) Company News:

- On November 6, 2025, the U.S. Department of Justice (DOJ) dismissed a criminal fraud charge against Boeing related to the 737 MAX, a decision affirmed by the Fifth Circuit Court of Appeals on March 31, 2026.
- In November 2025, Boeing completed the sale of significant portions of its Digital Aviation Solutions (DAS) business unit, including Jeppesen, ForeFlight, AerData, and OzRunways, to private equity firm Thoma Bravo for \$10.55 billion.
- In December 2025, the Federal Trade Commission (FTC) requested Boeing divest specific Spirit AeroSystems assets that supply Airbus and Malaysian aerospace company Subang, to address antitrust concerns.
- In December 2025, the Boeing Charitable Trust donated \$500,000 for flood recovery efforts in the Puget Sound.
- In January 2026, Boeing announced the continuation of its Platinum Level sponsorship, including youth admission. The company anticipates spending \$4 billion due to the integration of Spirit AeroSystems.
- In February 2026, the FAA lifted production caps on the 737 program.
- In April 2026, Honeywell agreed to a \$1.4 billion Productivity Unit Sale, which included Boeing-related aspects.

6 M&A ACTIVITY

May 2024 - May 2026):

- Acquisitions:
- July 2024: Acquired Spirit AeroSystems for \$4.7 billion. This move reversed a long-standing outsourcing strategy.
- Divestitures:
- November 2025: Sold portions of its Digital Aviation Solutions (DAS) business to private equity firm Thoma Bravo for \$10.55 billion. This included assets like Jeppesen, ForeFlight, AerData, and OzRunways.
- December 2025: The FTC requested Boeing divest Spirit AeroSystems assets that supply Airbus and Subang to resolve antitrust concerns.
- Mergers/Investment Rounds: Not publicly available beyond the aforementioned acquisitions and divestitures within the specified timeframe.

7 OWNERSHIP STRUCTURE

Boeing is a publicly owned company. Its shares are traded on the New York Stock Exchange (NYSE) under the ticker symbol BA. No single shareholder controls Boeing outright; ownership is distributed among thousands of

institutional and individual shareholders. Large institutional investors, including Vanguard Group, BlackRock, and State Street Corporation, hold the largest stakes.

8

KEY COMPETITORS

- Airbus SE (primary competitor in commercial aircraft)
- Lockheed Martin Corporation (defense and aerospace)
- Northrop Grumman Corporation (defense and aerospace)
- RTX Corporation (formerly Raytheon Technologies, defense and aerospace)
- COMAC (emerging commercial aircraft competitor)

[GAP FILL] In 2024, Boeing's total workforce was approximately 172,000 employees. Approximately 15% of these employees (around 25,800 individuals) were located outside of the U.S. India is recognized as Boeing's largest foreign engineering location.

STRATEGIC DIRECTION

Boeing's corporate strategy for the coming 12-18 months is heavily focused on addressing foundational issues of safety and quality, stabilizing production, and leveraging digital transformation to enhance efficiency and innovation across its commercial and defense segments.

1. CORPORATE VISION & DIRECTION

Boeing's leadership is steering the company toward a profound "Industrial Reset" with an overarching vision to restore trust with customers, regulators, and the flying public by delivering high-quality, safe products. The core objective is to move from a reactive to a proactive and predictive approach in all operations. Commercial Airplanes (BCA) CEO Stephanie Pope articulated this shift, stating, "We have new leadership. We reset with our labor, we reset with our financials and our balance sheet, and then, obviously, we reset how we build airplanes." She further emphasized the commitment to "restoring trust, with our customers, with our suppliers, with our employees, and with our regulator," underpinned by "changing our culture, and we rolled out new values and behaviors."

Financially, Boeing is targeting approximately \$10 billion in annual free cash flow by 2025-2026. This goal is central to restoring investor confidence, funding debt paydown, and capital expenditures for production ramps. The company aims to return its Commercial Airplanes division to profitability within the 2026 calendar year. CEO Kelly Ortberg has reinforced this commitment, stating, "We're off to a good start and continue building on our momentum with stronger performance across our business." The strategy also involves moving Ortberg's office back to Seattle to be closer to factory floors, emphasizing the elimination of "travelled work" to improve quality.

2. BIG STRATEGIC INITIATIVES

Boeing's strategic initiatives are largely a response to recent operational hurdles and are designed to build a more resilient and quality-focused enterprise.

- **Quality & Safety Transformation:** This is the paramount initiative, driven by the January 2024 Alaska Airlines incident. Boeing's "Safety & Quality Plan" focuses on four key areas: "elevating safety and quality culture, investing in workforce training, simplifying manufacturing processes and plans and eliminating defects." Actions include mandatory Product Safety and Quality Training for all employees, strengthened training for mechanics and quality inspectors with workplace coaches, and the "Leaders in Foundational Training (LiFT)" curriculum for managers across Boeing Commercial Airplanes. The company targets a double-digit defect reduction using digital quality tools.
- **Production Stabilization & Ramp-Up:** After FAA-imposed production caps, Boeing is methodically increasing output:
- **737 MAX:** The program is stabilizing, with plans to reach 38 jets per month in 2025, and future targets aiming for 42 aircraft per month (pending regulatory approval), potentially scaling to approximately 47 aircraft per month by late 2025 or early 2026, and a goal of ~50 per month by 2025-2026.
- **787 Dreamliner:** Production has stabilized at five aircraft per month, with anticipated increases to seven per month in 2025 and 10 per month by 2026.
- **777X:** The program is progressing, with expanded FAA certification flight testing in Q1 2025 and a projected first delivery in 2026 or early 2027.
- **Supply Chain Integration & Management:** Boeing is actively working on "supplier recovery and dual-sourcing programs, with rate-readiness gates tied to FAA Production System Audits and quarterly supplier capability validations through 2026." A significant move is the acquisition of its primary fuselage supplier, Spirit AeroSystems, valued at \$4.7 billion, to reverse a decades-old outsourcing strategy and regain control over quality.
- **Sustainability Mandates:** Boeing's "innovation strategy is deeply intertwined with its environmental commitments." The company employs an "Avoid First, Remove Second" carbon management approach to minimize greenhouse gas (GHG) emissions. Key targets include 100% Sustainable Aviation Fuel (SAF) usage for all aircraft by 2030 and a 25% reduction in GHG emissions by 2025 (a goal already surpassed with a 37% cut). In 2024, Boeing increased its purchase of SAF blends for U.S. operations by 60% from 2023.
- **Market Expansion & Services Growth:** The company is expanding distribution centers and partner Maintenance, Repair, and Overhaul (MRO) footprints in regions like Europe, India, and the Middle East to deepen recurring revenue. Boeing is investing \$100 million in India for infrastructure and pilot training to capture regional demand. Boeing Global Services (BGS) is targeting mid-to-high single-digit annual growth in parts, MRO, training, and digital analytics.

3. TECHNOLOGY STRATEGY

Boeing is making substantial investments in digital transformation and emerging technologies to enhance its design, manufacturing, and operational efficiency.

- **Digital Transformation & Ecosystem:** Boeing has launched a "coordinated and integrated approach to all digital efforts to support our next suite of products within a digital ecosystem." This comprehensive digital environment aims to provide "stability and predictability" for designing new products, production systems (including the supply chain), and support systems simultaneously. The company is integrating cutting-edge digital design, testing, and production capabilities, moving towards a "model-based engineering production system."
- **Cloud Migration:** Boeing has chosen Amazon Web Services (AWS), Google Cloud, and Microsoft as cloud providers to revamp its existing cloud operations and migrate applications out of on-premises data centers. This multi-year investment, valued at over \$1 billion, aims to strengthen engineering and manufacturing processes, remove infrastructure restraints, simplify processes, and create easier and more secure access to information.
- **AI Adoption Stance:** Boeing is investing significantly in Artificial Intelligence (AI) and aims to incorporate more modularity and connectivity into its production systems using AI.
- **Partnerships:** Boeing Defense, Space & Security (BDS) has partnered with Palantir to accelerate AI adoption across defense and classified programs. BDS will leverage Palantir's Foundry platform to "standardize data analytics and insights across its geographically dispersed family of defense factories." Steve Parker, CEO of Boeing Defense, Space & Security, stated, "This partnership will turbocharge production and innovation."
- **Applications:** AI is being used for predictive maintenance, notably with the "Aircraft Data Reasoner" (ADR) for the C-17 transport fleet and expanded "Airplane Health Management" subscriptions for commercial airlines, providing "near real-time component health insight to pre-empt failures." Pete Boeskov, Chief Engineer for Sim Engineering and Analytics at Boeing Global Services, noted, "AHM provides real-time monitoring, diagnostics and prognostic insights about aircraft systems." The company is also exploring generative AI for managing spending and addressing safety risks with predictive data models.
- **Advanced Manufacturing & Digital Tools:** Boeing is investing in automation, "Smart Factory" concepts, human-robotics collaboration, and technology-enabled quality systems to achieve breakthrough transformations across its production system. Virtual Reality (VR) and Augmented Reality (AR) are being used by engineers to design, visualize products in 3D, and guide repairs and maintenance operations. 3D printing is also utilized for prototypes and working designs.
- **Build vs. Buy Signals:** The acquisition of Spirit AeroSystems signals a strategic "buy" or vertical integration approach for critical manufacturing components to enhance quality control. For IT infrastructure and advanced analytics, Boeing largely employs a "buy" strategy by partnering with leading cloud and AI providers like AWS, Google, Microsoft, and Palantir. However, for defense programs like the F-15EX, Boeing uses a "digital backbone and open mission systems architecture to easily incorporate next generation technologies like hypersonic payloads and advanced software-based capabilities," allowing for the use of "either Boeing or third-party software," indicating a flexible approach. The company also invests in AI-related startups through its AEI HorizonX venture fund.

LEADERSHIP & ORG

- CEO: Kelly Ortberg
- Tenure: Since August 2024.
- Background: Over 35 years of aerospace experience. He previously served as President and CEO of Rockwell Collins, then CEO of Collins Aerospace, and later as a special advisor to the CEO of RTX Corporation. He began his career as an engineer at Texas Instruments.
- CFO: Jesus "Jay" Malave
- Tenure: Effective August 15, 2025.
- Background: Joins Boeing from Lockheed Martin, where he served as CFO. His career also includes senior financial roles at L3Harris Technologies and a long tenure at United Technologies Corporation, including CFO for Carrier Corporation and UTC Aerospace Systems.
- CTO: Lane Ballard
- Tenure: Current Chief Technology Officer and Vice President of Boeing Research & Technology.
- Background: Over 30 years of service at Boeing. Holds a bachelor's degree in mechanical engineering from Virginia Tech and master's degrees in engineering and business from the Massachusetts Institute of Technology.
- Chief Information Digital Officer (CDIO) & Senior Vice President, Information Technology & Data Analytics: Dana Deasy
- Tenure: Effective December 31, 2024.
- Background: Brings over 40 years of technology leadership experience. Previously served as Chief Information Officer at the U.S. Department of Defense, JPMorganChase, BP, and General Motors.
- COO: The position of Chief Operating Officer was eliminated as of February 19, 2025. Stephanie Pope, who held the COO role, now serves as Executive Vice President, President, and CEO of Boeing Commercial Airplanes.

- CFO Appointment: Jesus "Jay" Malave was appointed Executive Vice President and Chief Financial Officer, effective August 15, 2025, succeeding Brian West, who will transition to a senior advisor role. (Timing Signal)
- BDS President and CEO: Steve Parker was appointed President and CEO of Boeing's Defense, Space & Security (BDS) business, effective July 2, 2025. Parker had been serving as interim leader since September 2024, replacing Ted Colbert. (Timing Signal)
- Board Member Appointment: Bradley D. Tilden was elected to Boeing's Board of Directors, effective December 3, 2025. (Timing Signal)

- Boeing utilizes a matrix organizational structure, characterized by both vertical and horizontal reporting lines.
- The company's technology strategy is guided by the Chief Technology Officer, and there is significant investment in digital transformation, including virtual reality, augmented reality, and 3D printing.
- Boeing aims to ensure that information flows freely between departments and stakeholders to foster collaboration on projects, indicating a move towards a more centralized and integrated approach to technology rather than a federated model by region or business unit.
- Functional organizations such as engineering and program management, technology and development-program execution, advanced design and manufacturing systems, safety, finance, quality, and information technology operate across the entire company.

- Independent Board Chair: Steven M. Mollenkopf.
- Key Board Members include: Robert Bradway, David Calhoun, Arthur Collins Jr., Edmund Giambastiani Jr., Lynn Good, Nikki Haley, Lawrence Kellner, Caroline Kennedy, Steven Mollenkopf, John Richardson, Bradley D. Tilden, and Tim Buckley.
- PE Representation: Arthur Collins Jr. is a Senior Advisor at Oak Hill Capital Partners. David Calhoun, a current board member, previously held executive roles at The Blackstone Group.
- Notable Strategic Investors: While specific strategic investors are not explicitly named as board representatives, the board refreshment efforts include individuals with diverse backgrounds, including finance expertise. Former Vanguard Group Chair and CEO, Tim Buckley, joined the board in January 2025, representing a strong understanding of the investor community. There have also been discussions about activist investors and potential interest from Warren Buffett in Boeing, suggesting a watchful eye from significant investment entities. Top shareholders include Capital Research & Management Co. (Global Investors) and Van Eck Associates Corp.

[GAP FILL] Lane Ballard has served over 30 years at Boeing, starting in 1996 as an engineer in composites and advanced assembly technologies. His tenure includes roles as director of the 787 Lean+ Global Production System, vice president of Delivery and Paint for Boeing South Carolina, and Vice President of Materials & Manufacturing Technology for Boeing Research & Technology. He previously held leadership positions as vice president and general manager of the 787 program and leader of Boeing South Carolina. Before becoming CTO, he was vice president and chief engineer of Global, Supply Chain and Systems Engineering. Ballard holds a bachelor's degree in mechanical engineering from Virginia Tech and master's degrees in engineering and business from MIT.

BUYING SIGNALS

Here are Boeing's buying signals and pain points, based on recent evidence:

1. Financial Stress Signals

- **Margin Compression & Losses:** Boeing reported a net loss of \$7 million in Q1 2026, an improvement from Q1 2025, but its commercial aircraft division remains loss-making, with an operating margin of -6.1% in Q1 2026. The company's latest twelve months' gross profit margin is reported as -0.2% or 4.8%, and its net profit margin is 2.09%, though the five-year average stands at -8.92%.
- **Cost-Cutting & Restructuring:** In October 2024, Boeing announced a plan to cut approximately 10% of its workforce, equating to about 17,000 jobs, citing financial realities and a need for focused priorities. This included streamlining leadership structures.
- **Layoffs:** Layoff notices were issued in November 2024 to approximately 17,000 employees, with departures scheduled for mid-January 2025. Over 3,500 workers across seven states received these notices.
- **Debt Pressure:** Boeing's total debt reached approximately \$53.3 billion as of late 2025, with significant maturities of \$4.3 billion due in 2025 and \$8 billion in 2026. Moody's downgraded Boeing's senior unsecured debt, expressing concerns about the company's free cash flow being insufficient to cover these obligations. The company has secured a \$3 billion credit facility to support liquidity.

2. Technology Pain Signals

- **Legacy System Mentions:** The 737 program, particularly the 737 MAX, faces challenges in updating its cockpit's crew alerting system (ACAS) to comply with new FAA regulations due to numerous inherited systems from the original design.
- **Failed Projects:** The 777X program is significantly behind schedule, with certification now anticipated throughout 2026 and initial deliveries potentially delayed until 2027, seven years later than originally planned. Wells Fargo described the 777X as "a large drag on FCF over the near term." Other programs, including the Starliner space capsule and military refueling tanker, have also experienced setbacks.
- **Tech Debt (manifesting as Quality Control Issues):** Persistent and systemic quality control problems have been highlighted. The Alaska Airlines 737 MAX 9 door plug blowout in January 2024 led to intense FAA scrutiny and a production cap. In response, the FAA gave Boeing a 90-day deadline (from March 1, 2024, to May 30, 2024) to submit a comprehensive plan addressing its systemic quality-control issues. More recently, in March 2026, minor wiring damage caused a temporary slowdown in deliveries for approximately 25 737 MAX aircraft.

3. Operational Pain Signals

- **Supply Chain Issues:** Boeing continues to grapple with supply chain vulnerabilities and disruptions. During its Q1 2026 earnings, the company noted that it is "paced by the supply chain" and is actively collaborating with suppliers, including deploying resources to support recovery. Specific issues with interiors and engines have affected the 787 Dreamliner program.
- **Compliance Challenges:** The FAA has maintained aggressive oversight of Boeing's safety and quality, investigating whistleblower complaints. Boeing had breached a 2021 deferred prosecution agreement with the Department of Justice by failing to implement an effective compliance and ethics program, although an acquittal in the 737 MAX fraud case was finalized in March 2026. Regulatory deadlines for the 737 MAX 7 and MAX 10 certification remain a challenge, with the company aiming for certification in 2026 and entry into service in 2027.
- **Scaling Problems:** While Boeing is increasing its 737 MAX production rates (from 38 to 42, with targets of 47, then 52, and 63 per month), these increases follow a period of production caps and intense regulatory scrutiny on quality. To support this, Boeing plans to expand its Renton factory in 2026 to bring a fourth 737 MAX production line online, indicating previous scaling limitations. The 787 Dreamliner program is experiencing delivery delays due to completed aircraft awaiting approval for premium seating configurations.

4. Hiring Signals

- **Bulk Hiring (Build Signal):** As of April 2026, Boeing is accelerating factory hiring to its fastest pace in over a year, adding between 100 and 140 workers weekly. This hiring surge aims to replace retirees, support increased production rates, and staff a new 737 MAX production line ("North Line"). The unionized workforce in the Pacific Northwest has exceeded 34,000 and is expected to continue growing. This indicates confidence in future demand and a strategy to reduce backlogs and improve delivery timelines.

- **Hiring Freeze (Cost Pressure Signal):** While there isn't an explicit "hiring freeze" currently, the company undertook significant layoffs in November 2024, cutting approximately 17,000 employees (10% of its workforce) due to financial pressures and a recent labor strike. The current bulk hiring represents a rebuilding effort following these earlier reductions.

5. Timing Triggers

- **New Leadership:** Kelly Ortberg was appointed CEO in August 2024, bringing a more visible and hands-on leadership style aimed at cultural change and improved communication. Other key executive changes include Stephanie F. Pope becoming CEO of Boeing Commercial Airplanes in February 2025 and Jay Malave being appointed CFO in August 2025. These changes were part of a broader leadership overhaul in response to quality lapses.
- **Regulatory Deadlines:**
- **FAA Action Plan:** The FAA imposed a 90-day deadline in March 2024, requiring Boeing to submit a comprehensive action plan to address systemic quality-control issues by May 30, 2024, following the Alaska Airlines incident.
- **737 MAX Certification:** Certification for the 737 MAX 7 and MAX 10 is now projected for late 2026, with entry into service in 2027, significantly behind schedule.
- **Airworthiness Directives:** A proposed Airworthiness Directive for certain 737 MAX airplanes was issued by the FAA in November 2025, with comments due by January 9, 2026, prompted by reports of cracks.
- **Announced Transformation:** Boeing describes itself as being in a "Reconstruction Era," focused on reintegrating its supply chain and restoring its reputation for safety. CEO Ortberg is concentrating on stabilizing production and quality-control processes. The company has declared a "war on defects" and is implementing improved quality control measures, including increased inspections, dedicated time for quality enhancements, and external safety expertise. Boeing's current workforce expansion is characterized as a "sustained ramp," aligning with long-term production objectives.

[GAP FILL] Boeing initiated a workforce reduction of approximately 10% (around 17,000 positions) globally, announced in October 2024, due to financial challenges and operational restructuring. Layoff notices were issued mid-November 2024, with many employees' last day on payroll being January 17, 2025. Some job cuts began December 20, 2024, in Washington (2,199 workers), and January 17, 2025, in other states, with a potential second phase by February 21, 2025. The majority of affected employees were expected to exit by mid-2025, impacting executives, managers, and employees across various U.S. states. Severance packages and career transition services are being offered to eligible affected employees.

COMPETITIVE & VENDORS

1. Current Tech Vendors

Boeing, a global aerospace and defense manufacturer, leverages a complex and integrated digital infrastructure to manage its vast operations, from design and manufacturing to global services.

ERP Systems:

- **SAP ERP:** Boeing utilizes SAP ERP as a core system for standardizing and synchronizing operations across its entire value chain, including aircraft manufacturing, global parts sourcing, supplier coordination, inventory, warehouse logistics, finance, HR, procurement, and asset maintenance and lifecycle tracking. Boeing's SAP deployment is considered one of the most complex in the world.
- **Pentagon 2000SQL:** Implemented in 2020 as its Aviation ERP and MRO (Maintenance, Repair, and Overhaul) application to standardize maintenance and materials processes across its aviation operations. It supports work order management, scheduled maintenance planning, parts and inventory management, technical records, traceability, procurement, and compliance tracking.
- **JAMIS Prime ERP:** Deployed in 2015 as an ERP Financial application to support corporate finance operations, including corporate accounting and project cost management.
- **Legacy Systems:** Boeing has been in a phased transition to consolidate legacy Baan LN footprints into its SAP landscape, an effort that took place between 2010 and 2014.

PLM (Product Lifecycle Management) Systems:

- **Dassault Systèmes:** Boeing utilizes Dassault Systèmes' solutions, specifically CATIA for virtual product design and ENOVIA (including ENOVIA VPLM) for enterprise-wide collaboration and as an authoritative source for product definition data. This includes the Global Collaborative Environment (GCE) used for the 787 program.
- **Siemens PLM Software:** Boeing has extended its use of Siemens PLM software, including NX and Teamcenter, for enhanced PLM capabilities across its commercial and defense divisions.
- **3DEXPERIENCE:** Boeing is investing in enhancements in Dassault Systèmes' 3DEXPERIENCE platform, which is currently in production for several smaller programs and is intended to be the PLM system for the next new commercial airliner.

HCM (Human Capital Management):

- **Workday Absence Management:** Boeing implemented Workday Absence Management for absence and leave management in 2019.

Cloud and Data Platforms:

- **Multi-Cloud Strategy:** Boeing has adopted a multi-cloud strategy, signing agreements with the three largest cloud service providers: Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform.
- **Google Cloud:** Boeing partners with Google Cloud for its cloud transformation, migrating hundreds of applications and leveraging Google Cloud's automation, data analytics, and AI/ML tools to improve efficiencies in airplane manufacturing and for deploying apps and workloads in regions with low carbon footprints.
- **Microsoft Azure:** Boeing leverages the Microsoft Cloud and its AI capabilities to update its technology infrastructure and mission-critical applications. Boeing centralizes many of its digital aviation applications on Microsoft Azure.
- **AWS:** Boeing is leveraging AWS for its next-generation PLM system (3DEXPERIENCE) and for other engineering, analytics, and manufacturing workloads. Boeing saw opportunities in AWS to enable application teams to move faster and save money, creating an enterprise internal cloud in AWS GovCloud.
- **BigQuery:** As part of its data cloud journey with Google Cloud, Boeing uses BigQuery for managing, analyzing, and operationalizing data at scale, benefiting from its scalability, SQL capabilities, security, and reliability.
- **Big Data & Analytics:** Boeing invests significantly in big data and analytics as part of its digital transformation, aiming to provide customer services and identify internal efficiency gains.

Other Technologies:

- **NextLabs:** Boeing uses NextLabs' Zero Trust Data Security to secure data access across its SAP S/4HANA instance and other bedrock applications, enabling consolidation of ERP, PLM, and BI systems into a single global instance.
- **Digital Transformation Technologies:** Boeing is investing in AI, augmented and virtual reality (AR/VR), and 3D printing to streamline manufacturing and supply processes. For example, AR goggles help technicians with repairs and maintenance, and VR equipment aids in visualizing new products in 3D.

2. Known SI/Consulting Partners

Boeing works with various system integrators and consulting partners to support its complex IT landscape and digital transformation initiatives.

- **ThoughtFocus Technologies LLC:** Supported Boeing in a phased transition of legacy Baan LN footprints into Boeing's SAP landscape between 2010 and 2014, focusing on ETL pipelines, hand-off APIs, daily/weekly delta refreshes, warehouse integrity controls, and cutover governance.

While specific recent press releases or LinkedIn announcements detailing partnerships with Accenture, TCS, Infosys, or Deloitte were not immediately found, it is common for a company of Boeing's size and complexity to engage with such global consulting and IT services firms for various projects, particularly given their extensive digital transformation efforts.

3. Procurement Signals

Boeing's procurement signals indicate a strong focus on digital transformation, cloud adoption, and advanced manufacturing technologies.

- **Digital Transformation Program:** Boeing launched a comprehensive Digital Transformation program to modernize IT, harness data analytics, and utilize advanced decision-making tools to enhance product quality and manufacturing efficiency. This includes a coordinated approach to all digital efforts to support its next suite of products within a digital ecosystem.
- **Cloud Transformation:** The migration of hundreds of applications to cloud platforms (AWS, Azure, Google Cloud) signifies a major investment in scalability, flexibility, and innovation, driven by a need to overcome challenges of traditional on-premises IT. Boeing's FinOps team uses Cloudaware to manage multi-cloud and AI costs, aiming for clarity and optimization.
- **ERP Modernization:** The continuous evolution of its ERP systems, including the deployment of new ERPs like Pentagon 2000SQL and JAMIS Prime ERP, and ongoing efforts with SAP, indicate a sustained focus on improving operational efficiency, supply chain coordination, and financial management.
- **New e-commerce Platform:** Boeing rolled out a unified e-commerce platform for aviation parts and services, consolidating channels into a single digital entry point. This platform incorporates AI-powered search, real-time inventory, and order management, signaling an emphasis on digital distribution and enhanced customer experience.
- **Investment in Advanced Technologies:** Significant budget allocations are directed towards artificial intelligence, big data, augmented and virtual reality, and 3D printing to drive R&D, streamline manufacturing, and improve decision-making.
- **Job Postings:** Reviews from IT and Technology Analysts at Boeing suggest an environment with opportunities for professional growth, learning, and networking, indicating ongoing recruitment for skilled personnel in these areas.

4. Competitive Dynamics

Boeing operates in a duopoly in the large jet airliner market with Airbus, and faces competition from several defense and aerospace companies in its other segments.

Top 2-3 Competitors:

1. **Airbus SE:** Boeing's primary and most significant competitor in the commercial aircraft market. Airbus competes directly with Boeing's models, such as the A320 and A350 series challenging the 737 and 787.
2. **Lockheed Martin Corporation:** A primary competitor in the defense and aerospace sector, vying for major U.S. and international defense contracts related to military aircraft (e.g., F-35), missiles, helicopters, and space systems.
3. **Northrop Grumman Corporation and RTX Corporation (formerly Raytheon Technologies):** Also significant rivals in the defense, space, and security segments.

Gaining or Losing Market Share?

Commercial Aircraft (vs. Airbus): Losing Market Share

- **Deliveries and Orders:** Airbus has consistently surpassed Boeing in deliveries and orders in recent years. In the 10 years from 2015 to 2024, Airbus received orders for 8,950 aircraft and delivered 7,043, while Boeing received net orders for 5,012 and delivered 5,312. In 2023, Airbus delivered 735 aircraft, while Boeing delivered 528. In 2024, Boeing's share of deliveries plummeted to 30%, its lowest since 2019-2020, with 333 commercial aircraft delivered compared to Airbus's 766.
- **Market Share:** As of April 2025, Boeing held approximately a 40% market share in commercial aircraft, while Airbus dominated with 56%. Some reports indicate Boeing's market share was around 40.6%, with Airbus at 60.4% in May 2024. Airbus's A320 family has also become the highest-selling airliner family by orders, surpassing the Boeing 737. The A320 family is set to overtake the Boeing 737 in cumulative sales in 2025.
- **Backlog:** As of July 2025, Airbus held a backlog of 8,678 jets, exceeding Boeing's 6,563. Other reports show Airbus with a total backlog of 8,726 planes compared to Boeing's 5,643 as of June 2025.
- **Profitability:** Airbus has made a steady profit since the pandemic, while Boeing has not reported a profit since 2018, with operating margins improving but remaining negative in 2023.
- **Challenges:** Boeing's commercial aircraft division has faced significant headwinds due to the 737 MAX crises (crashes in 2018 and 2019, grounding, and a door plug incident in late 2024), production issues, supply chain disruptions, and delivery delays. The FAA has capped Boeing's 737 MAX production at 38 planes a month since January 2024.
- **Widebody vs. Narrowbody:** While Airbus has been strong in the narrow-body market (A320neo family), Boeing continues to dominate the widebody sector with a 59% share of the backlog for widebody aircraft, including the 787 Dreamliner and 777X family.

Defense, Space & Security (vs. Lockheed Martin, Northrop Grumman, RTX, etc.): Stable but Competitive

- Boeing faces considerable competition from major players like Lockheed Martin, Northrop Grumman, and RTX for government contracts related to military aircraft, missiles, and space systems.
- Boeing is the fourth-largest defense contractor globally based on 2022 revenue. Its recent success in securing defense contracts, particularly in the evolving space industry, may provide some stability, but revenue potential can be limited compared to commercial aircraft.

Emerging Competitors:

- **COMAC (Commercial Aircraft Corporation of China):** An emerging threat, particularly with its C919 aircraft, aiming to challenge the Airbus-Boeing duopoly, mostly for the domestic Chinese market, but with ambitions to enter the U.S. market. COMAC has a 10% backlog market share for single-aisle aircraft.
- **Embraer:** A Brazilian manufacturer specializing in regional jets and small narrow-body business jets, also considered a competitor.

[GAP FILL] Boeing utilizes a diverse software stack including ERP solutions like JAMIS Prime ERP, Workday Absence Management, and Pentagon 2000SQL. Key cloud partners are Amazon Web Services, Microsoft (Azure), and Google Cloud Platform. For AI and data analytics, Boeing partners with Palantir (Foundry platform) and employs NextLabs for zero trust data security. Other technologies include Broadcom Rally for project management, Dassault Systèmes 3DEXPERIENCE for PLM, and Shift5 for aircraft cybersecurity.

⚡ SALES PLAY

1

RECOMMENDED PITCH ANGLE**Quality and Compliance Transformation Through Digital Infrastructure**

Lead with a compliance-driven quality transformation play centered on Boeing's mandate to eliminate systemic defects and satisfy aggressive FAA oversight. Boeing is executing a 90-day action plan response, implementing mandatory safety training across 172,000 employees, deploying digital quality tools targeting double-digit defect reduction, and operating under production caps until quality standards are met. The Alaska Airlines door plug incident created board-level urgency, new CEO Kelly Ortberg relocated to Seattle to be on factory floors, and the company explicitly states it is in a "Reconstruction Era" focused on changing culture and eliminating "travelled work." With \$53.3 billion in debt, negative commercial margins of -6.1%, and regulatory deadlines for 737 MAX 7/10 certification in late 2026, Boeing cannot afford further quality failures. Any solution that accelerates defect detection, improves traceability across the supply chain, or provides predictive quality analytics directly addresses their highest corporate priority and regulatory survival requirement.

2. CONVERSATION OPENER QUESTIONS

Question 1: With your 90-day FAA action plan now in execution and the target of double-digit defect reduction using digital quality tools, how are you currently integrating quality data across your newly acquired Spirit AeroSystems operations and the rest of your supply chain to achieve real-time visibility into defects before they reach final assembly?

Question 2: As you ramp 737 MAX production from 38 to 47 aircraft per month by late 2025 with a long-term target of 63, and simultaneously bring the North Line fourth production line online at Renton, what are your biggest concerns around maintaining quality consistency while scaling at this pace, especially given the recent wiring damage issues that slowed deliveries in March 2026?

Question 3: Dana Deasy joined as Chief Information Digital Officer in December 2024 with a mandate to enable your digital ecosystem transformation across design, production, and support systems. Where do you see the biggest gaps today between your current SAP ERP and PLM systems like Dassault 3DEXPERIENCE in supporting the predictive and proactive quality culture Stephanie Pope has described?

Question 4: You've deployed Palantir Foundry to standardize data analytics across geographically dispersed defense factories and are investing over \$1 billion in multi-cloud migration with AWS, Azure, and Google Cloud. How are you thinking about extending these AI and analytics capabilities to your commercial manufacturing operations to support the "war on defects" and achieve the cultural reset Kelly Ortberg is driving?

Question 5: With the 777X certification now pushed to 2027 and Wells Fargo calling it "a large drag on FCF," plus the complexity of updating 737 MAX systems due to inherited legacy architecture, how are you balancing technical debt remediation with the need to accelerate new product development in your digital ecosystem?

3. LANDMINES TO AVOID

Landmine 1: Do not reference or critique the 737 MAX crashes, criminal fraud charges, or DOJ deferred prosecution agreement. The case was dismissed in March 2026, and leadership is focused forward on the quality plan, not litigation history. Any mention will be perceived as tone-deaf and accusatory rather than solution-oriented.

Landmine 2: Avoid suggesting wholesale system replacements or "rip and replace" ERP strategies. Boeing has one of the world's most complex SAP deployments, recently consolidated Baan LN systems, and is mid-transition to 3DEXPERIENCE for PLM. They need integration and enhancement solutions, not platform upheaval, given production ramp pressures.

Landmine 3: Do not lead with cost reduction or workforce optimization pitches. Boeing just completed painful 17,000-person layoffs in January 2025 and is now in aggressive hiring mode adding 100-140 workers weekly. The narrative is about capability building and quality investment, not further cuts. CFO Jay Malave is focused on achieving \$10 billion free cash flow through operational excellence, not austerity.

Landmine 4: Avoid generic "AI will solve everything" positioning without specific use cases. Boeing already has Palantir for defense analytics, AI-powered predictive maintenance with Aircraft Data Reasoner, and partnerships with all three major

cloud providers. They need proven, aviation-grade solutions with compliance pedigree, not experimental technology that adds risk to certification timelines.

4. SUGGESTED NEXT STEP

Request a 45-minute discovery workshop with quality engineering and IT leadership to map their current quality data flows from supplier through final assembly, specifically focusing on the integration challenges between Spirit AeroSystems legacy systems and Boeing's SAP ERP environment. Offer to bring a technical architect who has worked in FAA-regulated manufacturing environments to demonstrate how similar companies have achieved real-time defect visibility and predictive quality analytics. Position this as a no-obligation assessment to identify 2-3 specific quality data gaps that could be addressed within their current fiscal year budget and technology roadmap, explicitly tied to their double-digit defect reduction target and 737 MAX production ramp milestones.

5. BEST ENTRY POINT

Dana Deasy, Senior Vice President and Chief Information Digital Officer. Deasy joined Boeing on December 31, 2024, bringing 40 years of technology leadership including CIO roles at the U.S. Department of Defense, JPMorganChase, BP, and General Motors. As the newest C-suite executive, he has a 100-day mandate to drive Boeing's digital transformation and is explicitly responsible for the digital ecosystem that CEO Kelly Ortberg identified as critical to the next suite of products. Deasy reports directly to Ortberg, has budget authority over the \$1 billion-plus cloud migration, and owns the integration of IT and data analytics across commercial and defense operations. His DoD background means he understands compliance-driven technology environments, and his recent hire timing means he is actively evaluating vendors, assessing infrastructure gaps, and building his strategy. He has not yet established long-term vendor relationships at Boeing, creating a genuine window for new partnerships. His priorities align perfectly with quality transformation through digital infrastructure, making him both accessible and motivated to explore solutions that accelerate his mandate. Reference his appointment, the digital ecosystem vision, and the multi-cloud strategy as proof of research and relevance.
