 COMPANY SNAPSHOT

1 REVENUE & MARGIN

Landal GreenParks' last reported gross annual turnover as a standalone entity was €646 million for 2022. Operating and net margins are not publicly available. Post-merger with Roompot in 2023, individual Landal GreenParks revenue and margin figures are not publicly reported.

2 REVENUE TREND

Landal GreenParks' gross annual turnover for the last reported years (as a standalone entity):

Year	Revenue (Millions EUR)	Margin
2022	€646	Not publicly available
2021	€550	Not publicly available
2020	€405	Not publicly available
2019	€550	Not publicly available

3 EMPLOYEES

Landal GreenParks (now operating as Landal) employs approximately 3,500 people. Other sources indicate around 3,000 employees as of 2024. A breakdown by high-cost locations (US, UK, Germany, Australia, Canada) is not publicly available.

4 INDIA PRESENCE

Landal GreenParks does not have a publicly reported GCC, delivery center, or R&D center in India.

5 RECENT NEWS

Product News:

New Dutch escapes were highlighted as "Five New Reasons to Cross the Channel" (May 22, 2026).

Promotional "May Half Term Escapes: Super Staycations with Spring Savings" were announced (April 20, 2026).

Landal De Wielsche Dreef is set to open in July 2026 in Betuwe, Netherlands (April 16, 2026).

Company News:

A fire near Weerterbergen was reported (April 30, 2026).

Landal launched a new brand campaign, "You Need This," following its merger, with the full rebranding expected to be completed in 2026 (December 22, 2025).

6 M&A ACTIVITY

There have been no publicly reported acquisitions, mergers, divestitures, or investment rounds involving Landal GreenParks within the last two years (June 2024 - May 2026). The major merger of Landal GreenParks with Roompot and subsequent divestiture of 30 parks to Dormio Group was approved and completed in April 2023.

7 OWNERSHIP STRUCTURE

Landal (the merged entity of Landal GreenParks and Roompot) is privately owned and is backed by the American investment fund KKR & Co. It operates as an acquired/merged operating subsidiary of Roompot.

8 KEY COMPETITORS

Top competitors include:

Center Parcs (Europe)

Haven (Leisure Facilities)

[GAP FILL] Landal GreenParks' turnover for the specified years was:

2019: Approximately €623 million.

2020: €405 million.

2021: €550 million gross annual turnover.

2022: €646 million gross annual turnover.

The specific data for Landal GreenParks' operating margin and net profit for the years 2019-2022 was not found in the provided search results.

Landal, the unified brand resulting from the 2023 merger of Landal GreenParks and Roompot, is focused on cementing its position as a leading European holiday park operator. The company's strategic direction for the next 12-18 months is heavily influenced by this integration and a drive for sustainable growth and an enhanced customer experience.

1. CORPORATE VISION & DIRECTION

Leadership is steering Landal towards becoming the "undisputed European market leader in holidays in nature". This vision is underpinned by the ambition to offer the "most attractive and most diverse selection of holiday parks in Europe". The merger itself was intended to provide a "springboard for further international growth".

A significant leadership change occurred with Mikael Andersson stepping down as CEO in January 2026. Martin Jermiin was appointed as the new CEO, effective April 7, 2026, bringing extensive international experience in retail and business transformation, with a focus on sustainable growth and brand experience. During the interim, Chief Transformation & Strategy Officer Martijn Bouquet assumed day-to-day CEO responsibilities, indicating a continued emphasis on strategic transformation.

The company's core purpose is "We give everyone the freedom to find their happy place". To support this, Landal established a single international headquarters in Amsterdam by March 2025 (announced November 2024) to "further professionalise the organisation and work towards a future centred on cooperation and connection". This move aims to enable more efficient collaboration and stronger connections across its international teams.

2. BIG STRATEGIC INITIATIVES

The immediate strategic initiatives are centered around the post-merger integration and expansion:

Integration and Harmonization: A primary focus has been the "successful integration of Roompot and Landal GreenParks into one unified organisation". This includes aligning the operating model, commercial platform, and harmonizing employment conditions across the two previously distinct entities.

Brand Rebranding: The combined organization now operates under the single "Landal" brand, with the rebranding taking effect in 2025. Parks are gradually adopting a new appearance and brand identity.

Expansion: Landal continues its growth trajectory by adding new holiday parks. Recent and planned expansions include new locations in the Netherlands (e.g., Landal Sallandse Heuvelrug, Landal De Brabantse Wal, Landal Soof Heuvelrug, Landal Waterpark Oudehaske) and Great Britain (e.g., Landal Rockingham Forest). Dirk Anbeek, General Manager of Landal GreenParks, noted, "In the Netherlands, we still see sufficient room for growth in this sector. Still, also internationally there are development opportunities for a strong brand such as Landal GreenParks".

Sustainability Mandates: Landal is committed to strengthening and accelerating its sustainability targets, including CO2 and waste reduction. The company leverages Landal GreenParks' established expertise in sustainability and aims for its operations to be "completely climate-neutral by 2030". All Landal parks are Green Key certified, and for the ninth consecutive year as of March 2026, Landal was named the most sustainable brand in the 'Holiday Parks' category within the Sustainable Brand Index. Initiatives include protecting biodiversity, planting new trees, creating wildflower meadows, and reducing chemical use.

Quality Improvements & Investments: The company emphasizes continuous investment in modernizing and innovating its offerings. This includes renovating accommodations, restaurants, and other facilities.

3. TECHNOLOGY STRATEGY

Landal's technology strategy is geared towards enhancing the digital guest experience and streamlining internal operations post-merger:

Digitalization as a Core Competency: Roompot's "expertise in digitalisation and project development" is being utilized to "develop the current Landal GreenParks locations more quickly".

Platform Consolidation: A key focus is the "integration and harmonisation of Roompot and Landal GreenParks' digital systems". Carla Milovanov, CIO, appointed in May 2024, is specifically tasked with this, bringing experience in integrating numerous brands under a single technology stack. The aim is to achieve "one commercial platform, and one operating model".

Hybrid Hospitality Experience: Landal is actively developing a "seamless hybrid hospitality experience" for its guests, working with partners like iO (formerly Intracto) on UX strategy & design, and app & web development. This includes an online booking management system that aims to reduce stress for guests and allow owners to manage rental homes. The Landal app provides guests with practical and recreational information, enabling digital check-in and activity planning.

Vendor Relationships & Build vs. Buy: The company partners with specialized IT providers. For its UK operations, Landal GreenParks UK has partnered with Elite Dynamics, adopting their "EliteParks park management system" as the preferred software solution. This partnership aims to enable shared availability and integrated bookings, indicating a "buy" strategy for core park management software. Concurrently, the collaboration with iO for digital experience development suggests a "co-create" or "build" approach for differentiating guest-facing digital services.

[GAP FILL] Mikael Andersson stepped down as CEO of Landal GreenParks on January 15, 2026. He had served in the role for six years, having been appointed CEO in May 2024 after previously holding the position of Chief Commercial Officer since 2019.

LEADERSHIP & ORG

1. Key Decision Makers:

CEO: Martin Jermiin. Appointed as CEO effective April 7, 2026. Jermiin brings extensive international experience in retail and business transformation, having served seven years as CEO of Flying Tiger, where he was instrumental in positioning the brand across many countries and achieving growth.

CFO: Bastiaan Haks. Started on June 1, 2024. Haks possesses vast experience in corporate finance, including a background as CFO of divisions at Unilever and extensive involvement in investment, merger, and takeover projects.

CIO (Chief Information Officer): Carla Milovanov. Started on June 1, 2024. Her initial focus is on the integration and harmonization of Landal GreenParks' and Roompot's digital systems. Milovanov has significant international experience in the travel and hospitality sectors, previously leading global hotel and client technology teams at Accor.

COO (Chief Operations Officer): Information regarding the current COO is not available in the provided search results. Jeroen Mol previously held the COO position for Roompot and Landal GreenParks, appointed on October 16, 2023, but stepped down due to medical reasons, with his departure announced on May 16, 2024. A successor was expected to be announced.

2. Recent Leadership Changes (C-suite or VP changes in last 12 months – timing signals):

CEO Transition: Mikael Andersson stepped down as CEO on January 15, 2026, after six years. Martijn Bouquet, Chief Transformation & Strategy Officer, served as interim CEO from January 15, 2026. Martin Jermiin was appointed as the new CEO effective April 7, 2026. This significant change indicates a strategic shift and leadership renewal at the highest level.

UK Managing Director: Jeremy Hipkiss was appointed as the new Managing Director for Landal UK on February 5, 2026. He succeeded Paul Hardingham, who left the company at the end of 2025. This change signals a focus on accelerated growth in the UK market.

3. Org Structure Signals:

Landal, following its merger with Roompot, is moving towards a centralized organizational structure for its technology and operations. A single international headquarters was established in Amsterdam by 2025. The role of Carla Milovanov, CIO, specifically involves the "integration and harmonisation of Roompot and Landal GreenParks' digital systems," indicating a consolidated technology approach. The company aims for a "future-proof integration of park operations, IT, procurement, and brand" and emphasizes "uniform systems, processes and working methods" for international growth.

4. Board Composition:

Chairman of the Supervisory Board: Dirk Anbeek. He was appointed Chairman of the Supervisory Board on October 16, 2023. Anbeek previously led the successful carve-out of Landal from Awaze/Wyndham and oversaw its growth during the COVID-19 pandemic.

PE Representation & Strategic Investors: Landal has been owned by the American investment fund Kohlberg Kravis Roberts & Co (KKR) since its merger with Roompot in 2023. KKR acquired Roompot in 2020. This indicates strong private equity backing and a focus on growth and market leadership in the European holiday park sector.

[GAP FILL] In 2024, Landal (merged with Roompot) had Mikael Andersson as CEO. Tjalling Smit took over the Chief Commercial Officer (CCO) role, which includes marketing functions, from August 1, 2024. Jeroen Mol was the Chief Operations Officer (COO) but stepped down, with Cees van Vliet becoming operational director (COO) from November 2024. The executive team also included Carla Milovanov (CIO) and Bastiaan Haks (CFO) from June 1, 2024, along with Belinde Bakker (CDO) and Alrik Boonstra (CHRO).

Here are buying signals and pain points for Landal GreenParks:

1 FINANCIAL STRESS SIGNALS

Margin Compression / Soft Consumer Demand: As of December 2024, the merged entity (referred to as Sandy by S&P Global Ratings, which includes Roompot and Landal GreenParks) was experiencing soft consumer demand and adverse macroeconomic conditions, leading to an expected flat top-line growth (0%-1%) for 2024. Occupancy rates declined by 1.6% as of June 2024, although this was compensated by a 2.8% increase in the average daily rate.

Historical Revenue Drop: Landal GreenParks (pre-merger with Roompot) experienced a 35% decrease in turnover in 2020 compared to 2019, closing the year at 405 million euro. While this is outside the last 12 months, it provides context of vulnerability to external economic factors.

Private Equity Backing: The merged Landal entity is supported by private equity investor KKR for ambitious growth goals through organic expansion and strategic acquisitions. This indicates access to capital for growth rather than financial distress, but also the pressure to deliver returns for investors.

2 TECHNOLOGY PAIN SIGNALS

Legacy System Mentions / Fragmentation (Historical): Landal GreenParks (pre-merger) faced challenges with fragmented product information managed across multiple departments and publication channels, leading to inconsistencies between online platforms and brochures. They aimed to establish a "single source of truth" for data and images to improve efficiency and prepare their technology infrastructure for the future.

Desire for Technology-Driven Solutions: Landal has actively sought solutions to improve the guest experience by reducing friction, allowing employees to focus more on guests rather than administrative tasks. They specifically looked for scalable technology solutions that could easily integrate into their existing API infrastructure to become more technology-driven.

Ongoing Digital Transformation Focus: Landal's IT department is central to developing, managing, and innovating systems. The company is actively working on system optimization, application development, and digital transformation initiatives to ensure smooth park operations and a flawless guest experience.

3 OPERATIONAL PAIN SIGNALS

Post-Merger Integration Challenges: The merger of Landal GreenParks and Roompot, approved in April 2023, involves integrating two distinct corporate cultures and procedures into a single organization that manages approximately 25 million overnight stays annually across 300 parks and 30,000 accommodations in 11 countries. This "integration of two different strands of DNA" is a significant ongoing challenge.

Need for Centralized Operations and Collaboration: The establishment of a new central, international headquarters in Amsterdam by March 2025 aims to professionalize the organization, enable more efficient collaboration, and strengthen connections across the diverse international teams and holiday parks. Specific departments like Guest Service and Logistics remain in other locations, indicating a distributed operational model that requires strong coordination.

Operational Value Creation through Transformation: Landal has appointed a Chief Transformation Officer in April 2026, Martijn Bouquet, whose role focuses on driving change, collaboration, growth, and the "future-proof integration of park operations, IT, procurement, and brand." This highlights an ongoing effort to optimize and unify operational processes.

4 HIRING SIGNALS

Bulk Hiring for Growth and Operations: As of May 2026, Landal is actively advertising 449 vacancies across various operational roles including technical staff, hospitality, reception, and supermarket positions, as well as internships and seasonal jobs. This indicates a strong "build signal" driven by expansion and ongoing operations.

Strategic Senior Hires: In April 2026, Landal was actively recruiting for a "Head of Investment Management," a senior role focused on overseeing investment analysis for real estate developments, refurbishments, and

financing to support the company's growth and financial health.

New Headquarters Staffing: The new international headquarters in Amsterdam, opened in March 2025, houses approximately 400 employees dedicated to strengthening Landal's European market position.

5

TIMING TRIGGERS

Post-M&A Integration (Ongoing): The merger of Landal GreenParks with Roompot was approved in April 2023, and the integration process is a primary focus.

Rebranding and Brand Transformation (Ongoing): The full rebranding of the merged entities under the new "Landal" brand began in 2025 and is scheduled for completion in 2026, impacting over 260 resorts across nine European countries.

Recent CEO Transition: Mikael Andersson stepped down as CEO on January 15, 2026, after six years, and a search for his successor is underway. Martijn Bouquet, Chief Transformation & Strategy Officer, is currently assuming day-to-day CEO responsibilities. This signifies a new leadership phase and potential shifts in strategy.

New Leadership Team (Prior to CEO departure): A new leadership team was installed in the summer of 2024, with Mikael Andersson as CEO (until his recent departure). Dirk Anbeek became Chairman of the Supervisory Board in October 2023, specifically tasked with overseeing the integration and CEO appointment.

New International Headquarters: Landal opened its new central, international headquarters in Amsterdam in March 2025, a strategic move to professionalize the organization and enhance collaboration.

Ambitious Growth and Expansion Plans: Landal has a stated ambition to become the undisputed European market leader in nature holidays, supported by KKR, focusing on both organic growth and strategic acquisitions. This includes opening new parks in 2026.

[GAP FILL] For 2024, Sandy Holdco (parent of Landal and Roompot) is forecasted to have a revenue between €920 million and €930 million. As of June 2024, the group reported €482.9 million in revenue, representing a 0.6% decline compared to 2023 on a comparable basis. S&P Global Ratings estimated the adjusted EBITDA for 2024 at €177 million.

COMPETITIVE & VENDORS

1. Current Tech Vendors:

Landal GreenParks utilizes a range of technology solutions to manage its operations and enhance guest experience. Key systems identified include:

Park Management System (PMS): For its UK operations, Landal GreenParks partners with Elite Dynamics, implementing their flagship EliteParks system. This solution manages shared availability, dynamic pricing, reservations, and bookings.

Access Control & Digital Key: Landal has adopted Salto Systems' Salto KS, a cloud-based smart access control solution. This enables a "Seamless Arrival" feature, allowing guests to use the Landal app for digital keys to open bungalows, reducing the need for physical check-in at reception.

Guest-Facing Applications: The Landal app is a central component for guest interaction, providing booking overviews, park information (opening hours, facilities), activity reservations, bike rentals, and digital key functionality.

Data Platforms: The company has invested significantly in re-designing and restructuring its data warehouse, which was previously 12 years old. This initiative aims to consolidate financial information, booking data, guest reviews, and complaints into a unified platform for enhanced business intelligence and reporting across various departments.

Cloud & Integration: While no single overarching cloud provider is explicitly stated, their digital transformation partner iO Digital (see below) lists partners such as AWS, Drupal, Google Marketing Platform, HubSpot, Shopware, and Sitecore, suggesting potential underlying platforms or integrations used by Landal through their collaboration.

Sustainability Technology: Landal GreenParks has innovated by installing biodigesters at its parks, becoming the first holiday park in Europe to do so. These machines convert food scraps and organic waste into biogas for heating swimming pools and high-quality plant fertilizer for park maintenance.

2. Known SI/Consulting Partners:

Landal GreenParks collaborates with several specialized partners for strategic initiatives and system integration:

iO Digital (formerly iO): A long-standing partner, iO Digital has been instrumental in Landal GreenParks' digital transformation for over two decades. Their services include UX strategy & design, app & web development, and co-creating a "hybrid hospitality experience" that includes the digital check-in and digital key features.

Elite Dynamics: This partner is crucial for Landal GreenParks UK, providing and integrating their EliteParks park management system.

Adjust Consulting: Landal GreenParks engaged Adjust Consulting to professionalize its procurement function, focusing on optimizing purchasing strategies and ensuring all acquisitions contribute to the guest experience.

De Projectgroep (part of Satelliet Group): In an exclusive long-term partnership announced in March 2025, De Projectgroep is responsible for the design, complete (re)furnishing, and logistical fulfillment for all Landal parks across eight European countries.

No direct partnerships with large, multi-industry System Integrators like Accenture, TCS, Infosys, or Deloitte were identified in the search results for specific IT projects.

3. Procurement Signals:

Landal GreenParks exhibits several procurement signals indicating ongoing investment and evaluation:

Continuous Digital Transformation: The partnership with iO Digital for over 20 years highlights a sustained focus on digital innovation, including app development and seamless digital experiences. The implementation of the Salto KS digital key solution was driven by a search for technology to remove guest friction during check-in and to support their "technology-driven" mission.

Procurement Function Professionalization: The engagement with Adjust Consulting signifies a strategic effort to optimize and centralize procurement processes, which could lead to evaluations of new suppliers and systems for various operational needs.

Expansion and Integration: Landal GreenParks UK's expansion, with nine new parks being added, necessitates seamless integration of reservation systems, as seen with the Elite Dynamics partnership.

Post-Merger Integration: Following the merger with Roompot in 2023 (announced 2021), now operating under the single 'Landal' brand, there is a clear signal for significant integration efforts across systems and processes to harmonize operations for over 300 parks and 32,000 accommodations. Roompot was expected to use its expertise in digitalization and project development to accelerate the development of former Landal GreenParks locations.

Sustainability Investments: Landal's ambition to be climate-neutral by 2030 and its investments in green initiatives, such as biodigesters, indicate ongoing procurement for sustainable technologies and services.

Data Infrastructure Upgrades: The significant investment in re-designing and restructuring its data warehouse signals a continued need for advanced data management, business intelligence tools, and potentially further cloud infrastructure.

Cybersecurity Enhancements: A ransomware attack in June 2023, which compromised guest data via a MOVEit Transfer system, strongly suggests a potential need for increased investment in cybersecurity measures and data protection solutions.

4. Competitive Dynamics:

Landal GreenParks operates in a competitive European holiday park market, with key rivals including:

Center Parcs Europe: A major player with 28 resorts across the Netherlands, France, Belgium, Germany, and Denmark, known for its extensive facilities like Aqua Mundo (subtropical swimming paradise) and diverse accommodation options. Historically, Landal GreenParks surpassed Gran Dorado and Center Parcs to become the largest provider after acquiring parts of Gran Dorado Resorts.

Roompot: Prior to their merger, Roompot was a significant competitor, with a strong presence in the Netherlands, Belgium, Germany, France, and Spain, managing over 200 parks. The merger of Landal GreenParks and Roompot, operating as 'Landal' since 2023, has significantly reshaped the competitive landscape, aiming to create the "undisputed European market leader."

EuroParcs: This company has grown rapidly in recent years, operating over 50 parks in the Netherlands, Belgium, Luxembourg, and Austria, with aspirations to become the largest and best provider in Europe. EuroParcs focuses on unique holiday park experiences and a range of accommodations from glamping tents to luxury villas.

Other Competitors: Craft.co also lists Aqua Park, SeaWorld Entertainment, Longleat, and Dreamworld as competitors. Owlle also mentions Haven and Park Holidays as competitors, particularly in the UK market.

Gaining or Losing Market Share:

Landal GreenParks has historically been a strong market leader. In 2020, despite the challenges of the COVID-19 pandemic, Landal successfully retained its market leader position and reported 11% more growth than its competitors, according to sector association RECRON. The company has demonstrated a consistent strategy of European expansion, announcing 17 new holiday parks in 2020 and planning comparable expansion in subsequent years.

The merger with Roompot (now operating under the unified 'Landal' brand) is the most significant recent development, indicating a strong move to consolidate and gain dominant market share across Europe. This combined entity boasts approximately 300 parks and 32,000 accommodations in 11 countries, positioning it as a leading force in the European holiday park sector. The strategic intent of the merger was to form the "most attractive and most diverse selection of holiday parks in Europe" and become the "undisputed European market leader."

[GAP FILL] Landal GreenParks utilizes various technology vendors and software systems:

MOVEit: Software used for data transfer (noted in connection with a data breach).

Elite Dynamics (EliteParks): Provides park management systems, including shared availability, dynamic pricing, reservations, and bookings for Landal GreenParks UK.

Salto Systems (Salto KS): Offers a cloud-based access control solution for "Seamless Arrival" via the Landal app.

Maxxton: Chosen for its cloud-based architecture, multi-currency and multi-language support, and comprehensive features for bookings, check-ins, inventory, and reservations.

Stibo Systems (STEP MDM platform): Implemented for Master Data Management, alongside Sitecore (Web CMS) and Endeca (e-commerce search engine).

SALES PLAY

1 RECOMMENDED PITCH ANGLE

Post-Merger Integration & Technology Consolidation Play

Landal is in the critical phase of integrating two distinct organizations (Landal GreenParks and Roompot) into a unified technology platform, with newly appointed CIO Carla Milovanov specifically tasked with harmonizing digital systems across 300 parks in 11 countries. The company is simultaneously managing a complete rebrand finishing in 2026, establishing a new Amsterdam headquarters with 400 employees, and experiencing soft consumer demand requiring operational efficiency gains. The historical challenge of fragmented product information across multiple systems, combined with the explicit goal of achieving "one commercial platform, one operating model," creates an immediate window for solutions that accelerate integration, reduce operational complexity, and enable the new leadership team under CEO Martin Jermiin to deliver on KKR's growth expectations while managing flat revenue growth and margin compression.

2 CONVERSATION OPENER QUESTIONS

With Carla Milovanov focusing on harmonizing Roompot and Landal GreenParks' digital systems into a single commercial platform, what has emerged as the most challenging integration point between the two legacy technology stacks, particularly around guest-facing versus operational systems?

Now that the Amsterdam headquarters consolidation is complete as of March 2025 and houses 400 employees, how is the distributed operational model with Guest Service and Logistics remaining in other locations impacting your ability to achieve the "uniform systems, processes and working methods" required for international growth?

Given the June 2023 MOVEit ransomware attack that compromised guest data and your current technology consolidation efforts, how are you prioritizing cybersecurity architecture decisions to ensure the unified platform has stronger protection than the individual legacy systems?

With Martin Jermiin's appointment as CEO in April 2026 bringing retail and business transformation experience, and the new Head of Investment Management role focused on real estate developments and refurbishments, is there a technology investment framework being established to evaluate build versus buy decisions across the 300-park portfolio?

The Elite Dynamics partnership for UK operations and the iO Digital collaboration for guest experience suggest a "best of breed" approach, while the data warehouse restructuring indicates platform consolidation. How is the technology strategy balancing specialized vendor solutions against the need for integrated systems as you complete the 2026 rebrand across nine countries?

3 LANDMINES TO AVOID

Do not discuss the previous CEO transition negatively or imply instability. Mikael Andersson's January 2026 departure after six years is presented as planned leadership renewal, and Martin Jermiin's retail transformation background is positioned as strategic. Avoid suggesting leadership chaos during what is clearly an intentional transition period with Martijn Bouquet covering interim responsibilities.

Do not propose rip-and-replace of recently implemented systems, particularly Elite Dynamics EliteParks for UK operations or Salto KS digital key solution. These are new partnerships supporting expansion and were deliberately chosen. Focus instead on integration, enhancement, or complementary capabilities that work alongside existing investments.

Avoid sustainability topics as a primary sales angle unless directly relevant to your solution. While Landal has strong Green Key certifications and climate-neutral 2030 goals including biodigesters, sustainability is a brand differentiator they have already operationalized, not an urgent pain point requiring external help. Positioning here risks appearing generic rather than informed.

Do not minimize the complexity or cultural sensitivity of the Roompot-Landal integration by suggesting quick fixes. Leadership explicitly describes this as integrating "two different strands of DNA" across 25 million overnight stays annually. Proposals must acknowledge the scale of managing 30,000 accommodations across 11 countries with different languages, currencies, and regulations.

4 SUGGESTED NEXT STEP

Request a 45-minute discovery workshop with IT and Operations leadership to map the current state of the post-merger technology landscape, specifically focusing on identifying the top three integration friction points between legacy Roompot and Landal GreenParks systems that are delaying the "one commercial platform" goal or creating guest experience inconsistencies across the 300-park portfolio. Position this as a no-obligation assessment to provide a prioritization framework for technology investments supporting the 2026 rebrand completion, with a concrete deliverable being a visual integration roadmap showing quick wins versus strategic platform decisions. This approach respects their ongoing work with existing partners like iO Digital and Elite Dynamics while positioning your firm as strategic advisors who understand post-merger complexity rather than opportunistic vendors.

5 BEST ENTRY POINT

Carla Milovanov, Chief Information Officer. Milovanov started June 1, 2024, with explicit responsibility for integration and harmonization of Roompot and Landal GreenParks digital systems. Her background leading global hotel and client technology teams at Accor demonstrates experience with multi-property, multi-country technology platforms directly relevant to Landal's current challenge. As a recent hire still within her first 18 months, she is actively building her vendor ecosystem and establishing the technology architecture for the merged entity. She reports directly to CEO Martin Jermiin, who himself just started April 7, 2026, creating a unique window where both top technology and business leadership are newly appointed and open to strategic partnerships that help them deliver results. Milovanov's focus on system integration makes her the most logical entry point for any solution addressing platform consolidation, operational efficiency, or digital guest experience enhancement. Her international technology leadership experience means she will expect sophisticated, scalable solutions rather than tactical point fixes, and her remit to harmonize systems across the entire organization gives her both budget authority and strategic imperative to evaluate solutions that accelerate the integration timeline or reduce complexity.
